

# CPD LIVE

Free CPD education online

This CPD seminar entitles you to 1 formal CPD point. Please be aware you are required to manage your own CPD records. We will provide you with your participation certificate and answer sheet once you have attended the full seminar.

## WATER MANAGEMENT SOLUTIONS: FUTURE PROOFING DRAINAGE

Proudly supported by

1. When considering a project on site what are the important aspects to take into consideration in relation to drainage, runoff and ground water issues?
2. Aesthetics are important so how can drainage be visually appealing or even hidden and so not dominate an area?
3. Who is best placed to help when a project is in concept stage to achieve optimum drainage and eliminate or minimise water waste?
4. What is best practice when it comes to drainage?
5. What are the requirements, rules and regulations to be met when specifying product?

**At the end of this panel, attendees will be able to:**

- a) Explain how products can best help when siting a project with reference to drainage run off and ground water issues
- b) List processes and products that will help in sustaining water in relation to the brief and also uphold the desired aesthetics of the build
- c) Identify experts and products that will help to obtain the appropriate outcome for the project that includes liaising with experts in the field
- d) Outline best practice in relation to sustainability in drainage for a variety of projects
- e) Be able to list those products that meet standards but are also comply or exceed environmental guidelines and regulations
