Free CPD education online

This CPD seminar entitles you to 1 formal CPD point. Please be aware you are required to manage your own CPD records. We will provide you with your participation certificate and answer sheet once you have attended the full seminar.

GREENING PARCEL DELIVERIES FOR THE BUILT ENVIRONMENT TODAY

Proudly supported by

1. The explosion in e-commerce and parcel deliveries has been a plus in terms of convenience, but has it had negative consequences?
2. What are the solutions? Are there ways to maintain the convenience but minimise the environmental impacts?
3. What benefits do asset owners and operators see when smart delivery systems are implemented in their buildings?
4. Are 'parcel management systems' just simple lockers or something more sophisticated?
5. Are these systems able to maintain the convenience valued by consumers and also address security concerns?
6. Has Covid 19 heightened the urgency around this issue?

At the end of this panel, attendees will be able to:

- a) Identify the negative consequences associated with the rise in e-commerce and therefore parcel deliveries, particularly for multi-storey commercial and residential buildings
- b) Outline the emerging alternatives that can help alleviate these impacts. Examples include parcel management systems that enable deliveries for all occupants to be made to a single pick-up point
- c) Detail the typical component parts (software, security protocols, parcel lockers, etc.) of parcel management systems and how they interact to deliver parcels securely and efficiently
- d) Identify the potential financial, social, and environmental benefits associated with such systems
- e) Apply your critical evaluation to choose an appropriate parcel management system for a given project
